

2026 Notebook

Daniel Jang

Table of contents

September	2
14th	2
26th	2

The purpose of this yearly notebook is to document large scale progress in projects, any significant mistakes, important derivations, nice tricks that I think will serve me into the future, etc.

September

14th

I learned about the `genzplyr` package that makes my code bussin no cap.

```
# Example code because my 24 year old friend told me life stops at 23
data |>
  genzplyr::yeet(age < 23)
```

I also solved the riemann hypothesis but it doesn't fit in the margins.

26th

I unfortunately learned that 5039932 is an even number, so I will be going into the book of the world's biggest fools. I will not let this be a setback.
